Selecting the menu at the top left corner of the curve will show its no. of segments. The menu at the top right corner is for specifying the no. of line segments (unless stated otherwise the no. of line segments is automatically calculated from the no. of segments in the curve). The value can be written as the decimal number, comma separated float numbers, or % as the percentage of the line length. The tool has two drop-down menus, one for giving the curve direction (clockwise or counter-clockwise) and the other for specifying the direction of the line segments (for the outer line segments). When the direction of the line segments is not specified, the tool creates them in the direction of the curve (but with the specified no. of segments) and moves them to an appropriate distance from the curve. The flow of calculation in this tool is as follows. After specifying the no. of line segments and directions, the tool calculates the angles of the curve and the positions of the line segments. The input data for this tool is the Bézier curve coordinates (X,Y) in the first coordinate system. Use The first input is the no. of line segments to be created from the Bézier curve, which will be automatically calculated by the tool. The second input is the direction of the line segments. The tool will create the line segments as needed to connect the two points of the Bézier curve. The tool draws the line segments in the direction of the curve, so in the following example: with the blue line segment extending from point 7 (0.988,0.988) to point 8 (0.988,1.988), the tool would create the line segment from point 7 to point 8 (and then from point 8 to point 9). So the line segment from point 7 to point 8 would be 1.0 unit long (equal to the total length of the curve), and the line segment from point 8 to point 9 would be 1.2 units long. The direction of the line segments can be specified using the radio buttons at the top right corner of the curve. If you select the radio button for specifying the direction of the line segments (either clockwise or counter-clockwise) and the direction of the line segments (for the outer line segments), the tool would create the line segments as specified. The tool has a drop-down menu for 82157476af
